

1 VIDEO WALL ELEVATION – (4x8 SAMSUNG UH55F-E)
SCALE: N.T.S.

4K Video Wall System

When **Avison Young** began developing a plan to refresh their Pasadena, California offices, the leadership team envisioned a bright, warm welcome for everyone who entered the lobby, in the form of a large format video wall. Avison Young partnered with **JAVI A/V** to design and install a **32-screen video wall system** that was custom designed with the architecture of the lobby in mind.

The project had a very tight schedule, and the team at **JAVI** successfully completed the concept design, engineering, prewiring, installation, and commissioning in **less than thirty days**.

The commercial screens were selected based on the internal processing capabilities, and provide the processing for the entire wall, **reducing the need for expensive additional processing hardware**. This design decision allows the customer to self-manage content and uses only two digital signage media players for the wall.

Partner Feedback:

“**JAVI is a true partner!** They understand what it takes to install a massive 32 screen video wall from beginning to end. Coordinating between architectural, structural, and design requirements for a project this size is no easy task and **JAVI A/V helped ensure our project was a success**. Our clients and tenants cannot say enough, when they enter our lobby, about how beautiful the new video wall looks!”

-Niki Claussen, Avison Young
