

BJ's Restaurant & Brewhouse.

With beginnings as a craft brewery and pizza restaurant in Santa Ana, California, BJ's has grown to be one of the most recognizable full service restaurants in North America. Today, a vital part of the BJ's experience are sports television and great music. Because BJ's prides itself on the quality of the entire experience in its restaurants, from food to the dining environment, it is not surprising that the company invests in quality audiovisual design and engineering.

The audio/video systems that we use to deliver the BJ's experience are controlled by an intuitive and easy to use touch screen panel in the restaurant. Team members are able to quickly and directly adjust the channel selection for each television without a handheld remote and are able to see a preview of the television they are adjusting right on the touch screen controller. The sound system volume and input selection are easily controlled using the same interface, simplifying the operation of the restaurant and increasing productivity by giving time back to the team to focus on guests and customer service. JAVI adds value for BJ's through it's design, engineering, project management, and installation services. With vast knowledge of localities and individual code requirements, a nationwide service and installation network, and innovative logistics practices, the JAVI team reduces overall costs and helps BJ's continue to grow aggressively and complete new store openings on-schedule.
