

Whiskey Cake Kitchen and Bar

Whiskey Cake is a different type of restaurant. The concept is **bold and edgy**, and needed a **sound system** design that could bring the personality of the brand into the restaurant.

We worked with the team to design and engineer an audio system that rocks and creates the exciting, fun and high-energy attitude the brand represents. By using **high-fidelity professional audio** components and digital signal processing, a system was created that brings the edgy loudness to the experience, without causing discomfort. **It's loud, but you can easily have a conversation.**

The hi-fi approach to the sound system design is paying off, with happy customers leaving five star reviews online.

“Really buzz worthy place with great food choices. The atmosphere here is so intoxicating. You can’t help but smile and want to talk. I haven’t been here and not seen it packed. It is "loud" but not at all in a bad way.” -Yelp! User
